

With facilitator guidance, students work in teams through cases to discover knowledge from biological and clinical sciences.

Monday	Tuesday	Wednesday	Thursday	Friday
Small Group	Essentials of Doctoring	Small Group	Essentials of Doctoring	Small Group
Large Group	Large Group	Large Group		
Large Group	Histology Lab			Weekly Assessment
Community Health	Anatomy Lab		Clinical Skills	

Students study the knowledge, attitudes, and skills for developing excellence in doctoring.

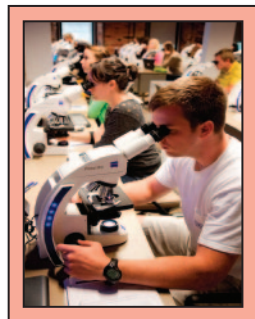

Faculty engage students interactively on a wide range of topics in medical science and practice.

Students check their achievement of the learning objectives with standardized tests that integrate the week's material.

Students put the principles of public health into action through collaborative projects with community partners.

Students learn cell structure and function utilizing traditional microscopy and digital technology.

Students work in teams to learn human anatomy through cadaver dissection.

Under supervision of experienced clinicians, students learn how to interview and examine patients.
